

Welcome to the 10th International Conferences on Flow Analysis in Porto

Jose Luis Costa Lima

REQIMTE, Faculdade de Farmacia, Universidade de Port, Portugal

Chairman of FLOW ANALYSIS X

Flow analysis has become a recognised powerful tool for the improvement of analytical methods. The revolutionary approach initiated with segmented flow and flow injection, followed by some other interesting concepts and instrumental developments, has become a field of research where human ingenuity is particularly important. This may explain why so many of us, and hopefully many others to come, feel attracted to this challenge.

We expect that the tenth edition of the International Conferences on Flow Analysis will be a privileged forum of discussion of advances in flow analysis and, most importantly, a way to get together, increase collaboration, encourage young researchers in this field, or make new acquaintances.

Therefore, we are delighted to welcome you all in Porto, Portugal, from 3 to 8 September 2006, and hope you will enjoy your stay in this city known for its hospitality, fortified wine and world heritage historical centre.
